

# MOBILITY WEEK IN THE LONDON NAUTICAL SCHOOL

NEWSLETTER FROM LUVIAN YHTENÄISKOULU

## HEAR YOU HEAR YOU!

Finnish team has been introduced to LNS

On **Monday** was the first official day of our London Mobility. We had a meeting at London Nautical School. Our host Mr Nevzat Yuksel and the Headmaster Mr Andrew Bull took us on a tour in the school. It was interesting to see some classes and teachers and the

well-behaved students. We were also impressed by the weekly parade. Traditions are clearly respected among the students.

In our first meeting we agreed on ground rules and policies. We also set approximate dates for future Mobilities to Portugal, Spain and Finland. We were well

taken care of and there were breaks for tea, coffee and even a walk by the River Thames. Luckily Mr Yuksel is very experienced with Erasmus Projects and he had helpful insights on this project.

FOUR DAYS OF LEARNING TOGETHER IN MULTICULTURAL AND INTERESTING ENVIRONMENT.  
REAL LIFE SOCIAL MEDIA AND PARTICIPATING AND COMMUNICATING WITH INTERESTING PEOPLE

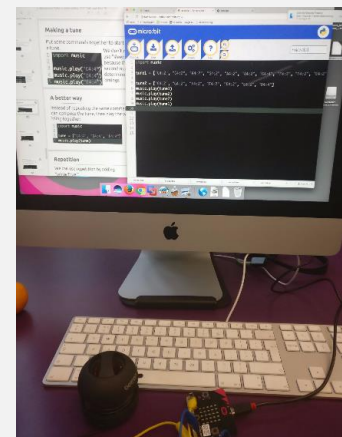

## CODING IS CHIP!

Learning about BBC Micro:bit with professionals

**Tuesday** was a day of learning for all of us! We took a tube to Clapham to attend a class on how to use Microbit in different contexts. The class took place in Community Learning Center. We learned how to use Python for coding the Microbit and how to code Kodu with it too. It was fascinating to make the leds shine and write words. At the

end of the day we even got to make music. It seems to us that the Microbit is a device of many possibilities.

On

## Wednesday

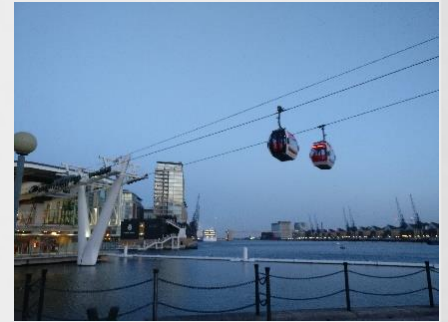

we learned about the Nautical activities of London Nautical School. In other words, we were taken to ride diesel work boats and ribs. Our sailing instructor told us many interesting things about the history and development of the Docksarea. There were construction projects going on and several industry buildings. Doing activities together with all the teams from Portugal and Spain and UK was very pleasant from the

start. We even seemed to develop our own kind of humor – a sign of good team spirit. We exchanged experiences from school work in and everyday life in our countries.

Next target was to visit the Siemens Crystal Science museum. There were lots of new technology for future urban environments and construction.

After all the activities we enjoyed coffee together with the group. Transportation away from Siemens Crystal was rather unusual: We decided to take a cable car

of Emirates Airlines over the River Thames.

## Thursday

brought more river and even marine activities with it. We took a Thames Clipper to see the ship Cutty Sark. Mr James Bullar told us about the history of Cutty Sark and we entered the ship to learn about sailing the seas in the past. We visited the traditional Greenwich Market in all its uniqueness. Lunch was served in the beautiful Greenwich area just meters away from River Thames. At the closing presentation Mr Yuksel handed us our certificates and we said goodbyes. We look forward to meet again and learning amore in the Young Masters of Games Project!
