DESCRIPTION OF OUR SCHOOL: The CEIP SANTA MARINA is a school located in the town of Magán (Toledo). We teach in Preschool Education (from 3 to 5 years old) and primary education, key stage one, two and three (from 6 to 12 years old)

Some of our educational aims are: encouraging our students to respect the educational community, its background and the environment; encouraging their own autonomy and intellectual skills; to involve the families in the development of school coexistence; to help the students to develop social skills in order to improve their relationships with others; promote the use of an active and constructive methodology to carry out significative learning using the new technologies and several kinds of information.

Our school has increase the number of students in the last years. On one hand, this is due to the urban development of the town in the last seven years. On the other hand, because of the immigrant families that settled down in the town.

The students and families involvement in the school life is completely different. This fact makes a big difference between some students and others. Nevertheless, we really try to offer a integral and comprehensive education for all students.

Our school considers the ICT can be used as a crossing element to develop the different levels of learning of each student. We work ICT in several areas: from the Escuela 2.0, the school´s website use, the smart board in the classroom, the PC corner in Pre-school Education and the use of new hardware as a specific tools for the ipad, as well as the use of film and its tools in the classroom.

We also think it is important to teach families and students to prevent dangers associated with de use of new technologies. So every year we collaborate with the Guardia Civil in lectures with the children to make them aware of the dangers of Internet and the misuse of social networking.

The faculty of teacher is involved in working with ICT and supports this project.
