

A report of work experience

We didn't have job placement. We only visited at two different companies.

The first company was Wellis. It is the European leading bath tubes maker. The main factor is in Hungary. Wellis manufactures both outdoor and indoor hot tubes, as well as counter-current pools for year-round use. Wellis uses very quality substances. It also loads the state of being environmentally friendly. Baths are made 100 % by recycling materials.

Wellis uses highly effective sound insulation. It's important because people can take a bath or a spa whenever they want without annoying the neighbors. They are also using highly effective heat insulation.

Every year they sell more than 5000 outdoor hot tubes.

My first impression was good. We were pleasantly welcomed. Work atmosphere seemed comfortable, and people worked together. There were working different aged people.

We used safety shoes and safety vest in visiting.

The second company was Vitafort. It makes food for animals. Vitafort is one of the leading companies that make feed. Vitafort produces more than 900,000 tonnes of compound feed per year.

Vitafort the basic objective is to produce products that meet the biological characteristics of the animals, which contain the nutrients and active ingredients needed for the optimum care of the animals at the best rate and even at the lowest doses.

My first impression was also good. People worked together, and they seemed happy. The Atmosphere was energy and supportive.
