

5D

1. He is trying to prove by giving examples that climate change is really happening.
2. The writer is speaking to people – especially young people – who want to learn about climate change and might have doubts about it. He wants to reach an audience who don't necessarily read science books or articles.

3. Red and orange = heat. For example, the globe is a red fireball.
White is used for snow and blue for water or melting ice.
Blue is a calm colour and it is used when giving facts.
4. Examples of humour: sinking while still talking in the pictures illustrating the rise of the sea level. A stereotypical fashion (hat and the shoe) describing the era that he is talking about.
Examples of irony: both groups who use the weather as evidence that climate change is or is not happening use incorrect facts.
5. He uses numbers to support his argument. The use of numbers makes him look well-informed and knowledgeable.
6. Agree: environmentalists, those who are concerned about the future of the planet.
Disagree: big corporations, oil and fossil fuel industries and science-sceptics
