

**Global Environmental Awareness and Responsibility (GEAR)  
a Toolkit for Inclusive Environmental Education**

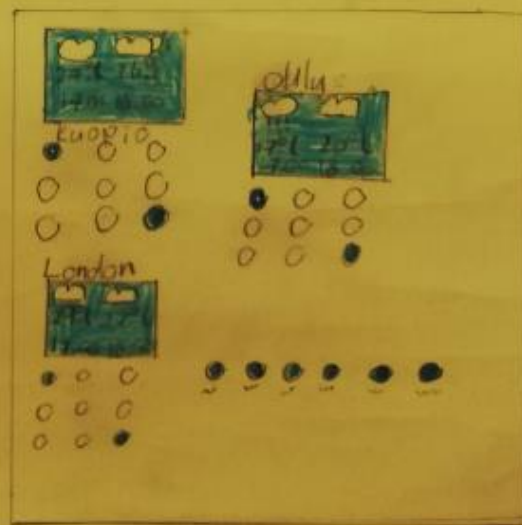

# Climate Box

The climate box is a big black cube. The box has many buttons most of them are yellow and blue. The climate box also has a few screens that show the temperature.

The climate box makes the world a better place because you can control the the temperature. The world only has five boxes that are located in London, Helsinki, Oulu, Lappeenranta and Kuopio. If more boxes were built and put in each city the temperature of the whole world could be controlled. Climate change could eventually be stopped. The boxes have been invented in Finland. Because box is big and heavy only one box is outside Finland.

I have invented the box because some countries have been flooded because of climate change. The climate box took a long time to build I started building it in 2046 and finished it in 2050.

The climate box took a lot of materials to build. The first year I did not build anything. I only designed it in the first year because I did not have enough money to build it. In 2046 I took a big loan from the bank. I eventually paid back the loan because I got a lot of money from the climate boxes.

# COVID-SUCKER-19

My invention is a machine that sucks all the corona cases and heals all the people that have corona. My machine's name is "COVID-SUCKER-19". My corona machine will save the world one day and it will heal everyone. Or at least I hope so. I really hope machine will work.

I built this machine at my house because was in quarantine. It took my three weeks to get it finished. I started off by building a motor for it but that did not work. So I disassembled my car's engine so it could get power. Then I put a vacuum cleaner and a really long straw at the end for sucking.

I tested it and it worked! I, myself had corona so I tested it to myself and really worked. Then I went to my neighbour's house who also had corona, and it worked again!

Here is a picture of it ↓

# THE DISASTER STOPPER

The invention I decided to make is a time machine to the past. You can decide which year you want to go to. The machine is black and purple. It is box shaped. It has purple decorations such as ribbons. It looks like an elevator. It has buttons that you can put your year on and then it will make a countdown and once it's over it will go to the year you have chosen.

I think that this will make the world better because you can travel to the past and stop the Covid-19 from happening. You could also travel to the past and warn people about the virus and help them get ready for it. You can help them make masks and make a cure for it. I also invented it so I could tell them that voting for Donald Trump might be a bad decision in the future.

I invented this to save the world and to help people with the future. I also invented this for people to know what will happen with the climate change.

# THE GAS CLEANER

## My Own Invention

The gas cleaner is a big environmental friendly machine that collects all the burnt fossil fuels coming from huge factories and certain vehicles that include gas like cars, motorbikes and trucks. Gas cleaners come in different sizes, small machines are usually made for vehicles and bigger ones are made for factories.

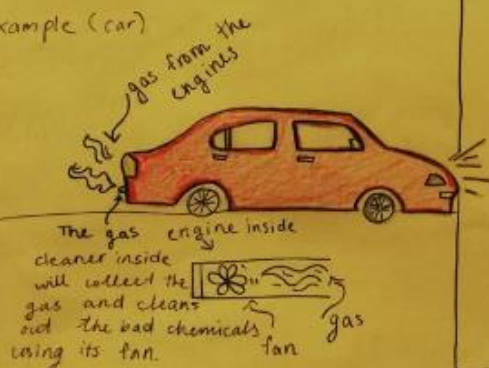

The main point of the gas cleaner is to prevent smoke or burnt fossil fuels from escaping into the air, it can reduce pollution from the gasses and help climate change stop getting worse. The vehicles that release gas are usually the main transportation we use when we drive like cars, trucks, busses and motorbikes, They release gas which travels into the atmosphere and create greenhouse gasses that are going into the air the warmer the earth will become, which creates huge issues to the whole world.

The gas cleaner can reduce the amount of greenhouse gasses that we produce using factories and transportation going into the air.

### DIAGRAM

Gas Cleaner for Cars, busses, trucks and more!

Gas cleaner for factories

# Pidva

## Pidva

P is for peaceful fruit which gives you a peaceful effect to be peaceful for 10 hours from eaten time.

A is for alone or being alone because it makes an effect that makes you think that nobody is beside you for 5 minutes.

D is for disaster because pidva makes a disaster in your mind to kill all unkind meners and vengeance for you to be peaceful.

## Facts

Pidva looks like an apple with an orange peel and it has a pipe to insert vitamins and there is a paper that has information about the fruit. The machine that makes pidva makes 9,463 pidvas per day or per 24 hours. It looks like a green melon.

V is for vitamins getting out of you because pidva replaces all vitamins with new vitamins and if some vitamins don't get out of you, you will die.

I is for invented fruit. Pidva is not a real natural fruit it is dangerous to eat more than 10 per dose.

## Why??

I have invented pidva because I wanted to stop the world war 3 from approaching or from civil wars. It has been invented in Brazil on 2022, and it is planned to get free to the world.

# THE Supermover

My creation is called the supermover. The supermover is a machine that can teleport people from a place to another. It does not need any electricity, it only needs water. Every time you want to teleport you need to fill a jar full of water, so that it works. The only thing that you need to do is to open the door, go inside, close the door then on your right is a keyboard, you write the place that you want to go to and then you press a big green button that has the word "Start" on it. On the top of the keyboard there is a screen and next to the keyboard and the screen there is the start button on the left side of it. The supermover is a big and a tall box that is either black and white or yellow and white. It has a picture of a lightning on it. I created this because then people do not use the cars or busses so much and it helps the world. It takes about 2-5 minutes to get where you want, but if it is far away it can take a little longer.

## FACTS

- It costs about 10.500€.
- It can also teleport things.
- In it can fit 5 people.
- You can also teleport to other cities or countries, it takes more than 10 minutes.

# The Pill

This pill is the solution for people to stop eating meat. You take this every day to make up for the meat that you would eat. It makes the world better because we do not have to eat meat. So the animals would not have greenhouse gasses. Then we can stop raising animals and use some animals for other things. I made this pill of magnetic energy tablets and put in a good taste in them. In the first week, you might be "sleazy" or your feet tired, but that will go away.

In order to use the pill because it will slow down climate change and it only costs 20¢ for a month. It is quick and easy to use, school and you can bring it with you anywhere. You take the pill at any time of the day, but it is recommended to take with some food.

## The Robot

I invented a small robot, it is made for every person. It helps with stress and problems. It listens and tries to help with everything. I think every person should have the robot because you can leave your stress with it.

The robot is small and comes with different colours. It can fit in a purse or a backpack. It looks like a little cube with a speaker on it. It also comes with a part you can listen music with, because music can relax people. It also has a handle.

It makes the world a better place because everyone is happier and stays safe. I came up with it because I was thinking how many people don't tell about their problems. So I started thinking about it and came up with the

idea to make a robot. First I thought it would be useless, but then knew at least people would have company and someone to talk to. The robot might just be a friend, so it has many different uses.

# The Covid-19 Shop

My creation is an covid-19 shop that is used from home. People have a screen at home from where you can order what ever you want for example milk. Then the screen will send your order to a robot at a storage and the robot will send the milk up an tube that goes to your house. The milk will arrive in about two to twenty minutes.

My invention would make the world a better place because it would lessen the covid-19 infections and I invented it so we could go back to normal life sooner.

## The brain clip

My invention is the brain clip. It is a very small thing that almost looks like a rubber. You plug the brain clip in your brain and you can teleport into another place.

The brain clip would make the world better because if you are in a situation that is very bad, for example you are being murdered, you can just leave and teleport to another place. You can also use the brain clip to go to other countries for free.

But you cannot use the brain clip every day, in fact you can only use it two times in your life.

You can only use it twice because if you could use it always the world would be a very messy place.

The way I invented the brain clip was that I was looking at things that were already invented and then I got the idea. I invented it because I thought that it would be fun for the world to use. I made this invention in October 2019.

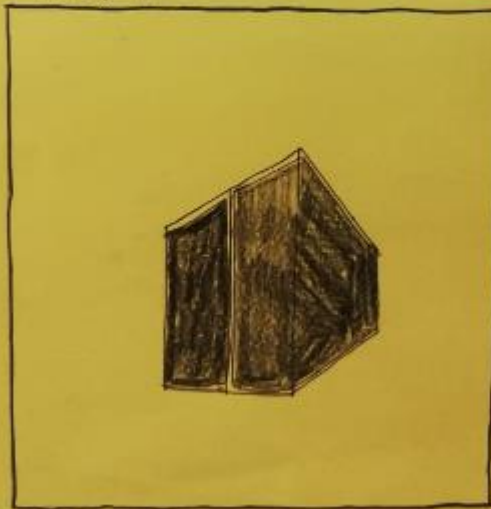

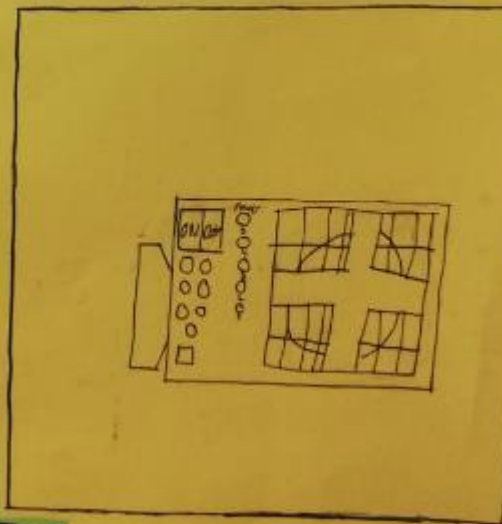

# ICE MACHINE

My creation is something that makes things colder. In the arctic areas, the ice caps melt, so this is useful for that. My creator is quite small, but it does make things alot colder. Why is it good for the ice caps? Well, the polar bears have better place to live in. They are almost extinct already. It makes the world better so that the islands like the Maldives won't sink and be under the sea. It also won't be so hot. I created this because I thought that it would be quite useful for many other things. It does not really have a name, but I just call it the ice machine. Pretty simple. It also does look quite boring but it really does do something. It looks like a regular box, but when you press just once button it is not a box anymore. After it has been opened, you would see many other buttons. The biggest button is the off button, the rest are just how strong you want it to be, so how cold it is going to be. 3 or 4 should be enough to keep the arctic cold and freeze the ice caps again. If you want to keep your home cold, there are also smaller versions of the same thing that have a smaller power. One is enough for that. Only investigators get this machine, for free.

WHEN THE MACHINE IS CLOSED

WHEN THE MACHINE IS OPEN

# the Cooler

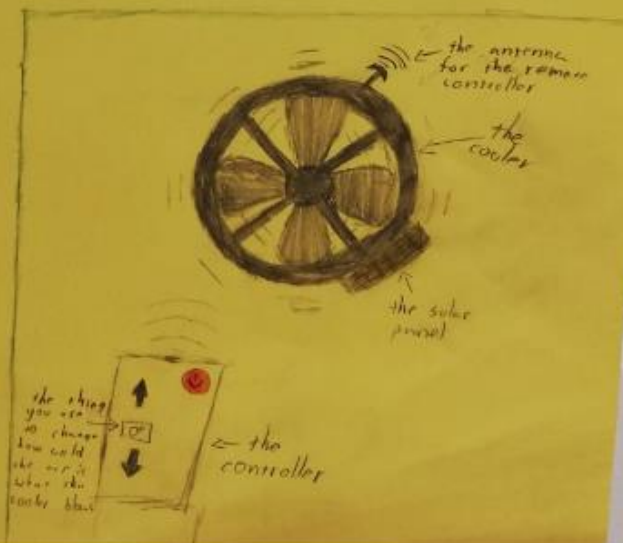

The cooler is a machine that cools the earth. It is about the size of a house. It floats in space. It looks like a huge fan. It uses the light of the sun for energy to spin the fan.

It blows cold air towards the earth and the earth becomes cooler. It mostly blows cool air to the north pole.

It will stop the global warming and it will stop the melting of the ice.

It is controlled by a remote controller. The remote controller can change how cold air it blows. The remote is stored in a very safe place where only two people know where it is. The two people have security guards near them all the time to protect them from people who want the controller.

I came up with this idea because I wanted to save the polar bears because they are cute and I wanted to people to be happy.

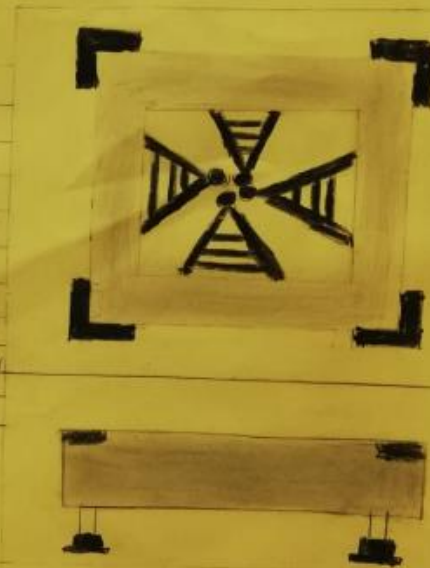

# Absolute Zero Cannon

My absolute zero cannon is shaped like a rectangle with a rectangular hole inside. It's outside dimensions are 10m by 12m and the inside rectangle's dimensions are 5m by 6m. My absolute zero cannon is made out of aluminum and carbon fiber.

## Function

When my absolute zero cannon is brought to the arctic and turn it on it will shoot out a beam that is  $-273,15^{\circ}\text{C}$ . After turning on my absolute zero cannon, it will be aimed at the water. When the beam of absolute zero hits the water, it will instantly cool the water around it.

How I created the absolute zero cannon  
I got inspiration for the absolute zero cannon when I watched an episode of The Flash. In The Flash they had an absolute zero machine.

# Time machine

My invention is time machine. It makes the world better place, because you can go back in time and change things that could be different.

Picture

The time machine works by you start the system, you spin the axel three times, you put the year, time and date on the rectangle, and the last thing you have to do is to pull the mogull up and then it takes few seconds to get to the place, year, time and date.

I created the time machine to go back or forward in time, to see or to change things. The time machine is used for everyone's use. It costs in stars, 3,000€. It is made of big metal box, axels, buttons, colde and a mogull.

# Talk To Animals

## Potion

My creation is a talk to animals potion. I invented it because I have always wanted to talk to animals especially giraffes and koalas because they are my favourite animals. It is a blue, red violet and green liquid. It is in a clear 10cm long test tube and right now when you are reading this they are trying it out. It works really well on certain animals but on some animals it dose not work so well. When you want to talk to animals you just have to drink the potion and Voila. There is also a down side to this potion if you use it too much you could end up in the hospital. Also you can not talk to specific animals such as sharks, bees or any deadly animals that could threaten your life. I thought this invention would make the world a better place <sup>A</sup>because we could interact with animals <sup>B</sup>they could tell us what they are thinking about <sup>C</sup>we could interview them.

Here are the instructions to make the potion

- ⚡TTAP⚡**  
talk to animals potion
- 10g of Diamond powder
  - 20g of gold flakes
  - 10g of lion whiskers
  - 10g of ancient powder
  - 5g of magic sprinkles
  - 5g of whipped cream
  - 10g of light sorcery
  - 30g of straight gold
- This recipe makes about 1l of the potion. It is a very complicated recipe. 10g of this potion costs 1000€ because all of the ingredients cost 100€.

Here is a scenario where you need ⚡TTAP⚡

The potion will be out for sale in 3022 (if people still exist)

# The Shrinker

The Shrinker (as the name tells) makes shuttle smaller.

The shrinker looks like a spaceship. It is coloured as silver and it has a surface that reflects. The door opens to the outside and when it has fully opened, from the other side of the door there comes strips of air. Inside there are a few buttons but not too much. There is a screen, control sticks, a pilot chair and a radio. Inside there is a mattress on the floor so it is safe and for safety there is a jetpack.

The Shrinker makes the world a better place because it helps science so that you can look at the life of small living creatures. And most importantly it can fight against bad bacteria and viruses. It can shrink so small that you can see viruses. It can fly when it is small and it has weapons that kill bacteria. It has a mechanic hand that can take samples of bacteria.

I invented this invention because there are so many different diseases and the Shrinker can cure most of them. Soon there will be no diseases. I am not going to be selling these because it takes too long, but the price of one product is 10 million euros. It costs just over 7 million euros. I have done a prototype of a shrinker gun. You just shoot with it and it gets smaller. The gun is used to shrink the shuttle. As I told I would not sell these but the scientists and hospitals can use this.

# The Hockey Stick 6089

I have invented the hockey stick 6089. It is a hockey stick that makes all of your shots go to the net. It weighs 1 gram and it is the lightest stick ever made. You can score from middle of the rink, from your goal's line and even from space. Everyone likes goals so this stick is for you. It costs around 1000€ but if you come to a competition you can get it for free!!! If you buy a special pack that costs 200€ it makes your skills better and passes. I have created this stick that everyone can score and that there will be more goals. This stick will change ice hockey.
