RESEARCH METHODS
COURSE OVERVIEW

During this course, students should:

- become acquainted with scientific methods
- familiarize themselves with quantitative and qualitative methods
- be able to conduct scientific investigations on their own
- become aware of the role of science in society
- gain knowledge on the use of technical equipment at the school
- become aware of academic report writing in the IB and in general
- consider and develop their own presentation skills
- become more familiar with the Approaches to Learning utilized in the Diploma Programme. This includes integrating these approaches during the course. Assessment

as well as peer and self-reflection is based on these approaches

Methods and assessment:

- Carrying out, reporting and presenting a qualitative or quantitative research investigation
- Participation assessed (during lessons and presentations)
